Akses ke Server LDAP BBG Pake VPN

Username: minova.hris
Password: L#&yt6wQ
Server: server.bbg.co.id

Key di web config:

```
<add key="BASE_LDAP_DOMAIN" value="*****"/>
<add key="BASE_LDAP_PATH_ENTRY" value="LDAP://ldap.bbgemilang.co.id:389/uid=@username,ou=Users,dc=bbgemilang,dc=co,dc=id"/>
<add key="BASE_LDAP_USERNAME_PATTERN" value="uid=@username,ou=Users,dc=bbgemilang,dc=co,dc=id"/>
<add key="BASE_LDAP_USER_SEARCH_FILTER" value="(uid=@username)"/>
```

Akses ke API Mobile:

AuthController => api/Auth/Login

```
json: {"Username": "minova.hris", "Password": "L#&yt6wQ"}
```

Perlu di tambahkan authorization di AuthController untuk akses ke Ldap Server seperti yg sudah berjalan di BBG Web, kemudian dari end point api/Auth/Login di Api mobile perlu mendapatkan return success/fail sesuai isi data di Ldap server, dengan format login sukses pada umumnya.

Contoh: {

```
"data": {
  "clientId": null,
  "userId": null,
  "userName": "captain",
  "fullName": "captain",
  "nick": null,
  "ldapId": null,
  "token": "OEL3lCzVar//BscGQLYqIQ==",
  "langId": null,
  "employeeId": null,
  "email": "",
  "profilePictureUrl": "http://localhost:17487/UserProfile/GetImageFromByteArray/captain",
  "useSSO": false
},
"acknowledge": 3,
"message": "Login success",
"version": "1.0",
"build": "0",
"accessToken": null
}
```
