#### Description

Referensi dari redmine dibawah ini issue / bug terjadi :

<http://remote.minovais.com:3000/redmine/issues/3039>

jadii ketika ingin add position below di organisasi tertentu terjadi error dulplicate position sedangkan di relasi organisasi tersebut belum ada position head alias masih kosong pas di cek ada issue di product di /Dev/SaveMaintainORM  
DI MinovaIS.MinovaES.Data.Element dll

yang awalnya

```

Wabr.Add(new WhereClause
{
    FieldName = "ObjectID",
    Operator = WhereClauseOperator.Equal,
    TargetValue = values["InitParentObject"].ToString()
});
Wabr.Add(new WhereClause
{
    FieldName = "ObjectClass",
    Operator = WhereClauseOperator.Equal,
    TargetValue = "0"
});
Wabr.Add(new WhereClause
{
    FieldName = "RelationshipClass",
    Operator = WhereClauseOperator.Equal,
    TargetValue = "P"
});

Wabr.Add(new WhereClause
{
    FieldName = "RelationshipDirectory",
    Operator = WhereClauseOperator.Equal,
    TargetValue = "A"
});
Wabr.Add(new WhereClause
{
    FieldName = "StartDate",
    Operator = WhereClauseOperator.LessThanEqual,
    TargetValue = values["StartDate"].ToString()
});
Wabr.Add(new WhereClause
{
    FieldName = "EndDate",
    Operator = WhereClauseOperator.GreaterThanEqual,
    TargetValue = values["StartDate"].ToString()
});
var dt_ = db.GetData("PHROM0002", Wabr);
if (dt_.Count() > 0)
{
    //if (action == ActionSave.Insert)
    {
        foreach (var i in dt_)
        {
            if (cekAbbr)
            {
                Wabr.Clear();
                Wabr.Add(new WhereClause
                {
                    FieldName = "ObjectID",
                    Operator = WhereClauseOperator.Equal,
                    TargetValue = i["ObjectID"].ToString()
                });
                Wabr.Add(new WhereClause
                {
                    FieldName = "ObjectClass",
                    Operator = WhereClauseOperator.Equal,
                    TargetValue = "P"
                });
                Wabr.Add(new WhereClause
                {
                    FieldName = "PositionHead",
                    Operator = WhereClauseOperator.Equal,
                    TargetValue = "1"
                });
            }
        }
    }
}

```

objectID mengambil objectID organisasi seharusnya mengambil RelationshipObject seperti di bawah ini

```
IS.MinovaES.Data.Element | MinovaS.MinovaES.Data.Element.InsertData
//if (values["ObjectClass"].ToString() == "P" && values["IsHeadPosition"].ToString() == "1")
if (values["ObjectClass"].ToString() == "P" && head == "1" && action != ActionSave.Delete)
{
    Wabr.Add(new WhereClause
    {
        FieldName = "ObjectID",
        Operator = WhereClauseOperator.Equal,
        TargetValue = values["InitParentObject"].ToString()
    });
    Wabr.Add(new WhereClause
    {
        FieldName = "ObjectClass",
        Operator = WhereClauseOperator.Equal,
        TargetValue = "0"
    });
    Wabr.Add(new WhereClause
    {
        FieldName = "RelationshipClass",
        Operator = WhereClauseOperator.Equal,
        TargetValue = "P"
    });

    Wabr.Add(new WhereClause
    {
        FieldName = "RelationshipDirectory",
        Operator = WhereClauseOperator.Equal,
        TargetValue = "A"
    });
    Wabr.Add(new WhereClause
    {
        FieldName = "StartDate",
        Operator = WhereClauseOperator.LessThanEqual,
        TargetValue = values["StartDate"].ToString()
    });
    Wabr.Add(new WhereClause
    {
        FieldName = "EndDate",
        Operator = WhereClauseOperator.GreaterThanEqual,
        TargetValue = values["StartDate"].ToString()
    });
    var dt_ = db.GetData("PHROM002", Wabr);
    if (dt_.Count() > 0)
    {
        //if (action == ActionSave.Insert)
        {
            foreach (var i in dt_)
            {
                if (cekAbbr)
                {
                    Wabr.Clear();
                    Wabr.Add(new WhereClause
                    {
                        FieldName = "ObjectID",
                        Operator = WhereClauseOperator.Equal,
                        TargetValue = i["RelationshipObject"].ToString()
                    });
                    Wabr.Add(new WhereClause
                    {
                        FieldName = "ObjectClass",
                        Operator = WhereClauseOperator.Equal,
                        TargetValue = "P"
                    });
                    Wabr.Add(new WhereClause
                    {

```

saat ini baru di Deploy di BWS karena datang issue ini dari BWS di port <http://192.168.3.105:61118/>

makasih
